Samsung Pay

Getting Started

- Navigate to and touch Apps > Samsung Pay. To download, touch 'install'
- Open the app and touch 'start,' enter your Samsung account information, then touch 'sign in'
- Review and agree to Samsung Pay Terms of Service
- To assign your fingerprint as the verification method, touch 'use finger print.' To use a four digit Samsung Pay PIN instead, touch 'skip'
- To add a card, navigate to and touch Add> Add a credit card or debit card
- Align your card inside the frame. Enter any remaining required information and touch 'next'
- Verify your identity by touching the desired verification method. Enter the password & touch 'submit'
- Enter your signature then touch 'save'
- To complete the process, touch 'done'

What is a Mobile Payment?

Mobile Payment technology is making its way into most merchant payment systems. It uses a technology called near field communication (NFC) which makes mobile payments a very safe, secure way to pay so that users do not have to use their physical card. Mobile payments come in a variety of forms with slighty different options, however all of the options are secure and allow you to store your card information on your mobile device. Mobile payments can be used in stores, online and offer a variety of other benefits depending on your mobile payment options.

Note: On compatible devices, a Samsung Pay shortcut will be preloaded, allowing you to download and install the app.
